

Omotayo Samuel - Logical ability

Alva's logic test assesses logical ability, i.e., how efficiently one processes complex information and draws accurate conclusions from it.

Average

31st - 50th percentile.

Your score on the logic test is 5, which is average.

Alva Labs interprets logical ability by benchmarking your score against *others* in the working population.

A score of *average* indicates a person requires an average amount of time and effort to interpret abstract information and form logical conclusions.

People with similar scores may find it initially challenging to work with intellectually demanding problems, but experience that if they work hard they can acquire and apply new knowledge.

Keep in mind when interpreting your results that *logical ability is far from the only factor* determining job performance or career success. Personality, motivation, values, and experience are also important, and strengths in one area *may outweigh weaknesses* in another.

* The most common standard scores are 5 and 6. The percentile ranges for these scores are wide due to the fact that they cover a large proportion of the population.
